

Logic Model

Project: Outreach to Senior Citizens Goal: Help increase seniors' access and use of high quality consumer health information				
Resources	Activities	Outputs (Deliverables)	Short-Term Outcomes	Long-Term Outcomes
Health science librarians to conduct training	Seniors enrolled in lunch program receive training	Six training sessions at each senior center	Seniors improve knowledge about their health concerns	MedlinePlus (M+) training becomes a regular part of the senior lunch program
Senior center partners		50% of seniors in lunch programs receive training	Seniors improve knowledge about their prescription drugs	Seniors will report using NLM resources after training
Internet access at senior centers	Senior center staff members receive training on accessing information on M+ or other NLM resources	Two training sessions per staff member and monthly follow-ups for three months	Seniors improve communication with physicians about health concerns	Providing assistance on M+ will be part of one staff member's job description
Senior center staff to support educational activities			Activity staff will become a resource for seniors to help them get health information –They will help seniors access M+ for health information –They will help seniors prepare for doctors' visits using M+	
	Family members (or other loved ones) receive training	Two monthly training sessions offered at varying times (day, evening) will be offered to family members	Each senior in lunch program will have one family member trained to use NLM resources Family members will report using M+ after training Family members will learn information about caring for seniors and find resources for managing seniors' health issues	Training family members will become a regular service offered through the senior center Family members will report use of online resources to help seniors after training
